

ISLIDE MANTRA

RPL TECHNOLOGY // RELIEF PRO LINING

Massaging Contours

The ripple term is derived from the contours of the footbed lining, that are wave-like and add relief to your feet after a long day in sneakers or shoes.

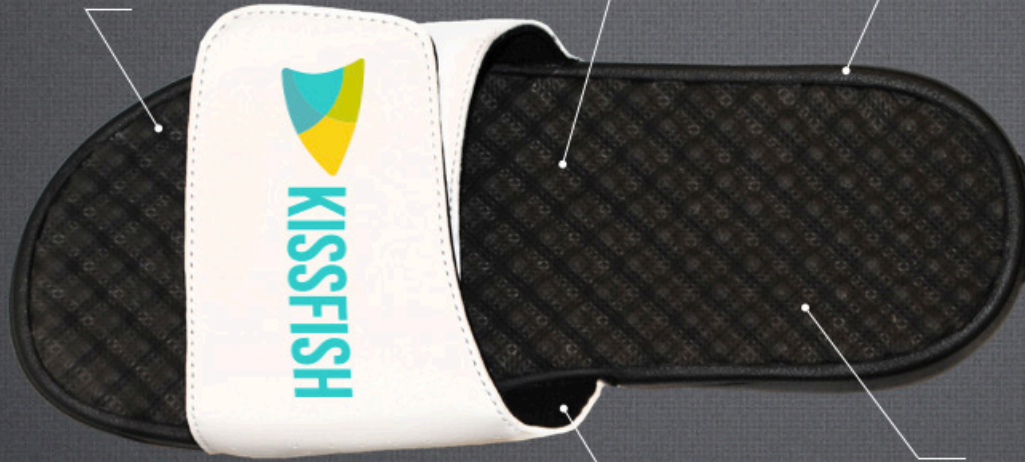

Antimicrobial Spray

Every slide will be sprayed with an antimicrobial spray after production to protect against sweaty socks and any smells that could arise from wearing slides after playing sports.

Stability

The midsole is developed with the highest quality EVA for a lightweight yet strong support during every day wear.

RPL

[pronounced *ripple*] technology is a wave-like foam footbed designed to help your feet recover and feel great.

Customization

Our strap design allows for full customization options for any buyer. We have an expansive design team working every day to create innovative custom options to set us apart from the rest of the industry.

Comfortability

Our super soft lycra leaves your feet with no abrasion. The strap can be adjusted using velcro so it is always a perfect, smooth fit.

Cushion

The RPL technology is made of a textured EVA foam that grants the perfect balance of support and cushion.

Signature Sneaker Outsole
Our outsole is sneaker inspired with forefoot and heel herring bone accents.
